

* The Recreation Scoring System is designed for teams to be performing level appropriate skills in order to receive credit for difficulty in stunts, pyramids, standing tumbling, running tumbling, and tosses. Level appropriate skills are determined by the USASF Cheer Safety Rule allowances within each level. **The numeric level in which the skill is first allowed will be considered to be a level appropriate skill, and count for difficulty credit.** Below you will find the rule progression to aid teams in creating a legal but creative building sequence, along with a list of examples of level appropriate skills. *(This document is a shortened version of the USASF Safety rules document, and does not provide an exhaustive list of every level appropriate skill. It is meant to be used as a guide. Please refer to usasfrules.com for the entire rules document to ensure all parts of your routine are legal. Page numbers are referenced below.)*

* The Performance Recreation division requires teams to include Elite Level Appropriate skills in order to increase their stunt quantity and difficulty score. Below you can find the list of elite level appropriate stunts for each level in which a team can perform to receive credit. Only the skills on the list will receive elite credit. All other skills performed within the level will receive level appropriate credit. *(This is not a requirement for teams in the traditional recreation division.)*
